

Project Anita Web Application

Product & Requirements Summary

Overview

The Anita application allows victims of workplace harassment to document the details of their experiences in time-stamped records on their phone or desktop. These records build an electronic dossier. When and if a victim chooses to do so, a copy of this dossier can then be sent by the victim to a third party (e.g. human resources).

The purpose of this application is to empower victims with the documentation they will need to strengthen their harassment case. This product can be used by any victim of workplace harassment.

Currently, workplace harassment reporting and subsequent investigations are mired with complication. When an individual reports experience with harassment to an employer, they most commonly do so via:

- Face-to-face meeting with Human Resources;
- Company email account; or
- Company-provided form submission (e.g. Google).

These mechanisms present three major challenges:

- It is difficult to report patterns of harassment (multiple incidents over time), and assume "one-off" incident reporting;
- The individual relinquishes ownership of a report (data) once it is submitted by company-provided tools; and
- Once submitted, the victim typically does not have transparency into where this information goes, who reviews it, how and if it is followed up on.

In addition, the burden of corroborating one's experience is placed on the victim reporting the incident. Frequently, a victim does not document and/or report harassment immediately following the incident and thus details of potential witnesses, timeline, and exact language used may be harder to recall.

Assuming that in most cases a report is taken seriously by an employer and an investigation follows, the victim then has little insight and/or transparency into this investigation process, when, if and how the harasser is informed of the claim against them, and how and when to follow up on the status and outcome of the investigation.

Employers face challenges in the investigation process, as well. When an individual reports an incident of harassment without well-documented evidence, a representative is left with an "accuser says, accused says" investigation cycle, which brings with it inherent liability.

For both victims of workplace harassment and employers there is an opportunity to improve the experience of reporting.

For the purposes of designing and developing an inclusive product, we are using the U.S. EEOC definition of [harassment](#).

Product Objectives

- Develop a tool that closes the gaps in the workplace harassment reporting lifecycle;
- Create a space for victims to gather their thoughts and document their experiences in real time, that is "owned and operated" by the victim (i.e. an individual's personal application with personal login); and
- Equip victims with the knowledge of best practices for workplace harassment reporting as well as their rights throughout the process.

Core Components

Consumer Web Application

- **Home Page** (*with signup as main call to action, future space for links to resources and support*)
- **Sign Up / Log-in Page** (*how users acquire an Anita account or log into their Anita account with their credentials*)
- **Initial Onboarding Page** (*how users become acquainted with the application features and how to get the most out of their Anita application*)
- **Add a Record Page** (*how users document a new time-stamped incident for their dossier*)
- **Dossier Dashboard** (*how users can view all previously documented incidents, and add attachments [photos, screenshots, addendums, etc] to a particular record after it has been submitted to the dossier*)
 - Company component displaying individual harasser's list of recorded incidents
 - Each Company component will have functionality to allow user to add new report
 - Each listed individual in a company will have a check mark to allow user to indicate they are ready to Make a Case, thus enabling the Make a Case button
 - Dashboard will also contain section for all submitted PDFs and timestamps
- **Make My Case Page** (*how users generate a copy of their dossier to send to a third party*)
 - Confirmation page with preview page link to see PDF before submitted to third party
 - User provided data on whom to send report to, their role, and email
 - User can edit text of body of email to send to HR contact
- **Generated Copy of Dossier** (*copy of dossier to be sent to third party*)
 - PDF includes all incident reports for a given individual (including images)
 - PDF emailed to HR Contact
 - PDF emailed to user, along with Success language and links to resources
- **Emails and (v2) Push Notifications** (*how users receive prompts to follow up with human resources after a copy of the dossier has been sent*)

High-level User Flow

- Alex visits the Anita web application and signs up to create an account on the **sign up / log-in page**
- After signing in with new login credentials, Alex is guided through a new Anita user **initial onboarding page**. At the end of the onboarding, Alex is prompted with a "Let's do this" call-to-action (CTA) button. Alex clicks the CTA and is taken to the **Add a record** page.
- As a new user, Alex adds a new record via the **Add a record** page. The first step in adding a new record, Alex first is prompted to identify with which company the incident took place. Alex is also asked to provide employment status (full-time employee, contractor, customer, consultant, no longer affiliated with this company)
- Once Alex has provided company affiliation, Alex is taken to the next page, which asks for the name of and relationship to the perpetrator.
- Alex is now prompted to add the details of the incident associated with the named perpetrator.
- Alex is guided through a page with a form to document the experience. (What happened, potential witnesses to the incident, who was told, and the option to upload any assets like photographs, screenshots of emails/texts/chats, that support what Alex has documented).
- At the bottom of this page, Alex chooses **Submit My Record**, and sees a pop-up box that reminds Alex that once a record is submitted, it will be added to the dossier and can't be deleted or edited. Alex can always add more assets to a record, but won't be able to change anything else. Data is stored in AWS to ensure a high standard of security.
- Alex is ready to submit, and selects **Submit**. Once Alex submits, a timestamp is issued and associated with the record to validate when it was submitted to the dossier. The dossier is organized chronology by these timestamps.
- Once Alex has submitted the record, Alex is brought to the **Dossier Dashboard** where all records are organized by company → individual → list of reported incidents. Alex can search via the search bar for keywords in the records.
- Only a few hours later Alex has a text exchange with a colleague who witnessed the incident. Alex takes screenshots of the conversation and goes back into the Anita application to add these assets to the relevant record. Using the search bar in the dossier dashboard, Alex quickly locates the relevant record, uploads the assets, and submits an amendment to the record. This amendment is time stamped.
- Alex continues to add to the Anita dossier as they experience harassment. At some point, Alex wants to submit the information to their employer. Alex goes into their Anita account. At the bottom of the **Dossier Dashboard**, Alex chooses **Make My Case**. Alex is taken to a new page which explains that a PDF of Alex's dossier will be created, so that Alex can send this to a third party. Alex will be provided with a template email to accompany the copy of the dossier.
- Once Alex chooses to, an email is sent to their employer (or relevant third party) with the copy of the report and the template email. A timestamp record is added to the associated dossier to mark when the copy was sent. Once the employer responds to confirm receipt, a timestamp is issued to the dossier.
 - Victims are not always full time employees reporting to an employer. They may be consultants, customers, "gig" workers. In these cases, the email will be to other relevant third parties (eg. employment lawyers, EEOC)
- Alex receives push notifications (to which Alex opted in) reminding Alex when and how to follow up to receive information about the status of an investigation.
- Alex is encouraged to attach screenshots of correspondence with their employer to the dossier.
- Once the investigation is finished, Alex can document that the case has been resolved. If the case is not satisfactorily resolved, Alex can explore sharing a copy of the dossier with external parties for additional support and/or action.

Dossier PDF

- This is a report of workplace harassment [official title]
- Please confirm receipt of this report once reviewed
- Timestamp when report was generated
- Reported by: [victim's name]
- Reported regarding: [harasser's name]
- Report account
 - Timestamped records, chronological order (oldest to most recent)
 - Each addendum assigned exhibits a, b, c, etc.
 - Addendum exhibits in order at the end of the report (photos, screenshots, etc.)
- Report powered by Anita [logo]

Future Components for Roadmap Discussion:

- **Enterprise Portal:** company / human resources portal to receive and track all Anita-submitted reports. Provides space for human resources to track status of cases, which the individual who reported can track on their own.
- **Anita Chatbot:** which guides users through the incident documentation process.
- **Search Functionality:** (*how users can search their dossier by keyword*)
